<b>Description</b> - Delete the column "Adjusted quantity rounded up to pack size" of the total table. Doesn't make sense to add "total" quantities that could have different packing sizes from the regular and accelerated tables.  - Hide the column "Cost" of the total table until users enter information on the columns "Pack size" and "Pack price or unit price" for each medicine at the regular table and accelerated table which has any "Quantity needed (in units)" calculated by the system.  See figure attached.

- It isn't possible to erase numbers entered in the column "Pack price or unit price" at regular and accelerated tables just deleting the data, users has to enter zero to display the dash. Please correct.

- When clicking any medicine at the regular table the cell become highlighted in green, but it doesn't happen for the accelerated table. Please correct. See attached.

At the Order-Quantity tab:

- Apply for the column "Medicine" the same "mattress profile" of fixed highlighted rows existing in the other columns at the regular, accelerated and total tables.

- Highlight the entire row when users click in one specific row and keep highlighted until users click in another row at the regular, accelerated and total

tables. Currently, it does happen only for the rows of the "Medicine" column at the regular order tab.
