eTBM 3 - Support #1973

Implement app events in EntityService for better code decoupling

08/04/2016 04:26 PM - Ricardo Memoria

Status:	Closed	**Start date:**	08/04/2016

Target version:	2.9.4 - Oct 10th, 2016	**Spent time:**	0.00 hour
Complexity:			

Description

Today there is a clear dependency over some components, for example, Case services components calling TagUpdateService.

The idea is that EntityServiceImpl raises an event using Spring event model.

So anyone that is interested in a particular entity that was included, deleted or updated, just listen to the proper entity class.
