Bug in QueryBuilderImpl when counting

08/11/2016 09:15 PM - Maurício Dos Santos

Status:	Closed	Start date:	08/11/2016
Priority:	Normal	Due date:

Target version:	2.9.2 - Aug 22th, 2016	Spent time:	0.00 hour
Complexity:			

Description

Eu incluí no método QueryBuilderImpl.createHQLCount() o trecho abaixo

```
if (hqlJoin != null) {
    s.append(hqlJoin);
    s.append('\n');
}
```

Esse trecho esta causando um erro em um teste relacionado ao AdministrativeUnit.

Eu precisei incluir esse trecho pois no método TagCasesReportService.getTagCases eu acrescento uma restriction relacionada ao Join. Veja:

```
public QueryResult getTagCases(TagCasesQueryParams qryParams) {
    QueryBuilder<TbCase> builder = queryBuilderFactory.createQueryBuilder(TbCase.class);

    builder.setHqlSelect("select c");
    builder.setEntityAlias("c");
    builder.addDefaultProfile("caseitem", CaseItem.class);

    *builder.setHqlJoin("join c.tags t");*
    *builder.addRestriction("t.id = :tId", qryParams.getTagId());*
    builder.addRestriction("c.ownerUnit.id = :unitId", qryParams.getUnitId());
    //TODO: builder.addRestriction("c.ownerUnit.ADMINUNIT = :unitId", qryParams.getAdminUnitId
());

    builder.initialize(qryParams);
    return builder.createQueryResult();
}
```

Sem essa condição e join no count eu terei um numero errado.
