**Description**

Implementation of the table tags in order to display fields in a tabular form, using the same idea implemented in the JSF <h:dataTable>, but keeping it simple and user readable.

Implementation propose:

```
<table value="collection-field" var="local-variable">
  <field />
  <field />
  <field />
...
</table>
```

Field labels will be used as column headers.

**History**

*- Status changed from New to Closed*

Implemented this initial version.

New improvements will be necessary, but it'll be handled by a next issue.
