The receiving date is default displaying the first day of the current month. But, should be displayed blank as default.

When displaying the date user entered, it should be as mm/dd/yyyy.

If the user let the receiving date blank, the system does not allow recording and a warning message should be displayed, this is a mandatory field.

The receiving date cannot be before or equal to the reference date (and neither after the expiration date). In this case, the system does not allow recording and a warning message should be displayed.
