Target version:	Version 2.0	Spent time:	0.00 hour
Description Currently, the system allows execute the forecasting with treatment regimen selected but without any number of case or percentage assigned for it. System should display a message warning users about this, as follow: "At least one enrolled case or one expected case must be reported to each selected treatment regimen to execute the forecasting". System must check both enrolled and expected cases, and also cases entered by number and by percentage. Currently, another message warning that at least one enrolled or expected case must be entered already exist, but doesn't take in account if there is some selected regimen without cases. This current message should be replaced by the new one proposed above.
