Description

When trying to include a new case comment, system generates an error.

Possible reason: In the error message the system complains about a missing value to a "section" column. Probably this is a required field in the table (not used by etbm) that is generating this error)

Fixed...

The problem was in the database in the Bangladesh server.

Entered in the server (www.etbmanagerdb.org) and manually removed the column "section" of table "casecomment".

Now it's working properly!
