Target version:	Version 2.1	Spent time:	0.00 hour

Description

In all forms in the case management module, check if the "save" or "ok" button are protected against user double-clicking on that.

For example, case edit page, if the user double clicks on the save button, an error happens in the server side:

```
org.jboss.seam.RequiredException
@In attribute requires non-null value: caseBDHome.caseHome
org.jboss.seam.RequiredException: @In attribute requires non-null value: caseBDHome.caseHome
at org.jboss.seam.Component.getValueToInject (Component.java:2361)
at org.jboss.seam.Component.injectAttributes (Component.java:1739)
at org.jboss.seam.Component.inject (Component.java:1557)
at org.jboss.seam.core.BijectionInterceptor.aroundInvoke (BijectionInterceptor.java:61)
at org.jboss.seam.intercept.SeamInvocationContext.proceed (SeamInvocationContext.java:68)
at org.jboss.seam.transaction.TransactionInterceptor$1.work (TransactionInterceptor.java:97)
```

Solution:

Check all forms and for all command button, implement the java script bellow:

Save button:

```
onclick="if (!disableButton(this)) return false;"
```

Cancel button

```
onclick="disableButton(this) "
```
